DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claim 23 is rejected under 35 U.S.C. 102(e) as being anticipated by Shukuri et al. (US Patent 6614684).

3. Shukuri et al. teach a non-volatile memory, comprising, an array of memory cells formed on a first region of a substrate, circuit peripherals including decoders, drivers, and sense amplifiers formed on the second region of the substrate and does not overlap the first region; and

a 3000-angstrom deep trench formed in the substrate between the first and second regions region, and filled with dielectric.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 24 – 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Iwasa (US Patent 5471423) in view of Shin et al. (US Patent 6180457).

7. Iwasa teaches a non-volatile memory, comprising, an array of charged storage elements formed on a semiconductor substrate (fig. 7), field dielectric material (12) formed over a surface of the semiconductor and positioned between charge storage elements, and electrical control gate (G) extending across tops of the array with a dielectric (col. 8 lines 56 – 64) positioned beneath and protruding downwards into slots formed over the field dielectric up to a depth of a top portion of the floating gate, and between adjacent charge storage elements. The row array (fig. 6) includes select gate (19) and source/drain regions(13). The top portions of the charge storage elements being wider than their bottom portions (fig. 7).

8. Iwasa lacks slots formed in the field dielectric.

Art Unit: 2825

9. However, Shin et al. teach slots (fig. 17) formed in the field dielectric for alignment (col. 8 lines 10 – 32).

10. Therefore, it would have been obvious to one of ordinary skill in the art to incorporate the teachings of Shin et al. into the Iwasa reference for self-alignment.
